

The grid will help you to understand how few salmon survive the full cycle of life.

For you to do:

The 1000 squares represent 1000 salmon eggs.

- Colour 1% yellow – this is the number of eggs that survive to smolt stage.
- Place a red **X** in 10% of the yellow squares – this is the number that survive to return to the river of origin to spawn.

That's right – 1 out of every 1000 eggs survives to return as an adult to spawn in the stream of origin!
